

FALCON™ CLIENTMINDER™ ALARM & DATA COLLECTION UNIT (DCU)

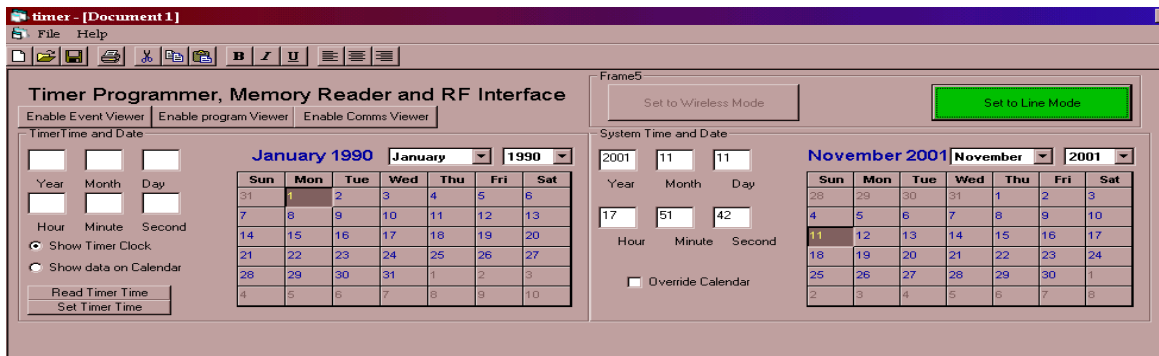

CLIENT PROBLEM

Clients are placed in tilt or recline systems specifically to eliminate pressure related complications but often develop those complications anyway. Until now, there has been no easy to use, affordable solution to both prompt client behavior AND monitor compliance.

THE FALCON™ SOLUTION

Falcon developed the ClientMinder™ Alarm and Data Collection Unit that can help train new system users, provide a safeguard for client’s with impaired cognitive function who may not always remember to maintain a prescribed shift regimen and provide documentation of client behavior for clinical review.

Sample screen showing ClientMinder™ data download.

SPECIFICATIONS

- Runs on 9-Volt Battery
- Can hold 2 months of client activity between downloads
- Data is exportable to MS Excel
- Works with all weight shift systems currently sold
- Alarm can be overridden at clinician’s discretion
- Maintains alarm function for over 670 hours before battery needs replacement
