

FALCON MidWheel Drive

We are not sure about this whole wheel thingy, but it looks as if it is here to stay so we've decided if it isn't going away, we might as well put it to work. We still haven't decided on such important issues as the color (yes, I am borrowing heavily from the hitch-hiker's guide), but what the hell, let's roll!

The problem for most clients in manual tilts is that the push wheels are located too far to the rear to make self-propulsion feasible. If we put the wheels up front, it is great for the client who needs to bring their legs under the seat, but again, the positioning is all wrong for self-propulsion. Obviously, **MidWheel** is the answer! Put the wheel in the right place to provide the greatest stroke with the least effort and without loss of position.

The MWMT (MidWheel Manual Tilt) is the first manual midwheel drive wheelchair to offer a full 50 degrees of tilt. The sturdy construction and many standard features, like dual-trigger releases, make this one of the safest, most durable tilt chairs available. The large selection of options and compatible accessories will suit the needs of most users without customizing an entire system. The 92° - 122° back angle adjustment range is designed for ease of client positioning. Our Universal Seat Frame makes size adjustment and system upgrade simple and cost effective.

The 24" wheels are spring loaded to prevent high centering and the loss of propulsion it entails. The **MWMT** is designed to provide room to position a contracted leg under the front seat.

Available with power tilt at no extra charge: The **MWPT (MidWheel Power Tilt)** uses standard electronics (batteries not included).

SPECIFICATIONS (STANDARD CONFIGURATION) FOR FALCON REHAB™ MWMT (MIDWHEEL MANUAL TILT)

Tilt		50° with Dual Trigger Release (Power Upgrade Available)
Seat to Floor Height		17.5" or 19.5" (17.5 STF reduces tilt angle to 35°)
Length		36"
